

November 2023

Dear Parents/Guardians of Year 10 Students

In 2024 all Year 11 Mathematical Methods and Specialist Maths students will be using graphical calculators as part of their standard equipment. All instruction is delivered with reference to Texas Instruments calculators.

**The TI-Nspire NONCAS CXII is available for purchase early next year through the Abacus website for \$224.00 (GST inclusive). Further information will become available early next year. Students are not required to order the calculator until mid-February. This is to allow for any movement from Methods to General Maths.**

Please do not purchase a different model or a second-hand calculator unless you have checked with me that it is approved by the QCAA for exams.

We believe we have negotiated the best deal possible for our students and hope that students will take this opportunity to equip themselves appropriately for their senior mathematics studies.

The calculators have a two-year warranty. Care, maintenance, loss and any replacement of the calculator will be entirely the student's responsibility as it will not be covered by any College insurance. Students are encouraged to ensure that their calculator is engraved with their name. This can be done at the College in the library.

Yours sincerely

Mr Chris Oxford  
Head of Mathematics
